

ForexSurvivor EURUSD Long Term Target set @ 2.000

Forex Department

Ticket, by then, will be high to pinpoint a stop in euro strength!

EURO is "really expensive" now and my knee-jerk response is to use the proverbial cerebral phrase "SAY WHAT?"

EURO strength doldrums persist! Travelling tickets are set to an expensive trend where moderate passengers will have to think twice before taking a plane. You can not pay the same fee when crude oil was \$55/bl few months ago and nowadays is soaring to \$120/bl a more than double configuration. Also, since no one (or very few) will be able to afford an expensive ticket to fly that high to take euro down, not even mass media 'Iranian rocket', then euro strength should not be contracted and any dip should be procured as the trend has become no naughty friend. Don't fear the stops (below supports) if taken next week as the about-to-be shaken long should be enacted soon.

In my colloquium of this week, I had concluded a calculation from my complicated trading computerized system that if euro touches 160 (not 15999) we will see 2.5 within less than 18 months where 2.0 would be the first long term target to be followed by 2.5 as a 2nd target few months later. Long term Deep Dip in euro will then be delayed. It is the same calculation when I said that if Crude Oil touches \$85 we will see \$106.5 and \$120 (you may check last summer archive regarding crude oil; same story for gold from \$550 to \$1000).

Biofuel: Back to Farming, Lack of Food, & No Peak in Oil

Starting with the definition of biofuel [bahy-oh-fyoo-uhl – English pronunciation] using my nonsensical vocal way and I come up with the designation of **bye** or **good bye (bi) fuel**. The prominent or the dictionary way can be broadly defined as solid, liquid, or gas fuel consisting of, or derived from recently dead biological material, most commonly plants.

Biofuel will be the reason for many 'unprecedented & imminent' controversial aspects of life, such as:

Drawbacks:

1. The new expensive price of food and food shortages
2. Starvation

3. Diversion of agricultural production away from food crops in a hungry world
3. Deforestation
4. Displacement of indigenous peoples (Indonesia, New Zealand, Australia)
5. Disrupting clean water supplies
6. Sparking Riots

Vantages:

1. The use of renewable biofuels in lieu of fossil fuels is said to reduce greenhouse gas emissions and increase energy security.
2. Jim Fitzpatrick, the Transport minister, said: "Making it easier for motorists to use greener fuel is an important step towards reducing carbon emissions from transport. It should help save millions of tonnes of carbon dioxide in the coming years."

Just for a quick look: compare the advantages vs. disadvantages and note that one advantage over many serious ones; it is joke I guess for the advantages if you keep reading the next lines (Researchers).

Researchers at the University of Minnesota published a study in February this year which found that growing biofuel crops on converted rainforests, grasslands or peat bogs created up to 420 times more CO₂ than it saved.

True or not? At best it's an oversimplification of a complex issue. Foods have to be produced differently. As oil and gas deplete, we will be left with sterile soils and farming organized at an unworkable scale. Many lives will depend on the ability to fix this. Farming will soon return much closer to the centre of American economic life. It will necessarily have to be done more locally, at a smaller-and-finer scale, and will require more human labour. The value-added activities associated with farming -- e.g. making products like cheese, wine, oils -- will also have to be done much more locally."

In my latest articles I'd referred to a piece of writing regarding **United States** or **Separated States** and the starting point to such a divorce is 'Farming.'

Biofuel Tactical Trading: find out about the composers of biofuel and invest in its components for the next 5 years (hint: wood)

All previous limit trades are valid as long as 'Trade Entry Validation' has not expired.

EURJPY Free Trade of 20 pips.

18Apr Spot Trade

Currency:	EURJPY
Trade Objective:	Correction Short term trend
Chart:	Daily
Trade Entry Validation:	24 April 2008
Trade Volatility:	Medium to Low
Trade duration once filled:	min 20mn, max 6days
Trade Selectivity:	Long Side
Spread Consideration:	Set the trade as it is below in its exact form

Before you trade note:

Long @ 16:00GMT on 24 April: target 20pips exact

Enjoy Yen cafe Trade.
